

Solution A

Solution B (Inter-link)

Solution C (Butt-link)

Installation Steps:

- ① First of all, choose an applicable mounting solution from above Solution A, B, C.
- ② Decide the right mounting positions, measure and mark the mounting areas of the strips, the locations for the connectors, etc.. Ensure that the cables' lengths are enough.
- ③ Mount the strips.

According to the mounting surfaces, you can choose an ideal way below:

a) by self-adhesive tapes

Tear off the protection paper of the self-adhesive tapes to stick the tapes on the back of the strips, then stick the strips firmly onto the mounting surfaces

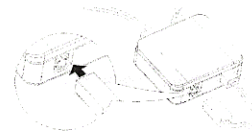

or

b) by mounting brackets

First fix the brackets by screws, then clip the strips inside the brackets.

- ④ Connecting the lights according to one selected mounting solution A, B or C
Solution A: connect 4 Strips with 4 lamp cables
Solution B: connect 4 Strips with 1 lamp cable and 3 extension cables
Solution C: connect 4 Strips with 1 lamp cable
- ⑤ Check the ends of the strips where no inter-linking, the end caps should be installed.
- ⑥ Insert the lamp cable connector into the connection box.

- ⑦ Connect the power supply and color controller system to power source.

Cautions:

1. This series of strip lights are the extra low voltage lighting, and should be working by constant voltage 12V DC power.
2. Before commencing installation, the mains power should be closed down.
3. The mounting surfaces should be free of the dust, oil stain and uneven materials.
4. In need of cleaning the light strips, use a damp cloth, never a strong detergent.
